

Klowra Anima Dual Footswitch

OPERATING GUIDE

Overview

This guide explains how to set up the **Klowra Anima Dual Footswitch** for use with **Klowra Bloom Infinity** series pedals. The connection and setup process is the same for all models in the series. The **Klowra Limbo Reverb** is used as the example below.

If you plan to use the **Klowra Anima Dual Footswitch** with other devices, please refer to the user manual for the specific device.

Connection and Activation

Use the included 1/4" (6.35 mm) TRS cable:

- Connect one end to the **TRS jacks**.
- Connect the other end to the **CTRL** jack on the **Limbo Reverb**.

Once connected, the **Limbo Reverb** will flash red and automatically enter Calibration Mode.

Tip: Always use a TRS cable. Using a TS cable may prevent the device from being detected or cause an incorrect control range.

Calibration

Once connected, the **Limbo Reverb** indicator will flash red to indicate Calibration Mode. While in this mode, repeatedly tap all the footswitches on the **Anima**.

The device will automatically exit Calibration Mode after approximately 5 seconds, at which point it is ready for normal operation

Not working after calibration?

If the pedal does not respond correctly after calibration, try the following:

- Unplug and reconnect the cable on both ends.
- Confirm the *Anima* is connected to the **TRS jack** and the *Limbo Reverb* is connected to the **CTRL jack**.
- Re-enter Calibration Mode and immediately tap **all the switches on the Anima** quickly and repeatedly.
- If the issue persists, try a different 1/4" (6.35 mm) TRS cable.

TRS MAP Switches

Assigns the footswitches to the **TRS jack** contacts.

Settings:

- T:A / R:B
- T:B / R:A

(T = Tip, R = Ring)

Note: This switch only changes the signal mapping of the **TRS jack** output.

Where Every Tone Blooms.
